A Study of Braids (Mathematics and Its Applications) Kunio Murasugi, B. Kurpita
In Chapter 6, we describe the concept of braid equivalence from the topological point of view. This will lead us to a new concept braid homotopy that is discussed fully in the next chapter. As just mentioned, in Chapter 7, we shall discuss the difference between braid equivalence and braid homotopy. Also in this chapter, we define a homotopy braid invariant that turns out to be the so-called Milnor number. Chapter 8 is a quick review of knot theory, including Alexander's theorem. While, Chapters 9 is devoted to Markov's theorem, which allows the application of this theory to other fields. This was one of the motivations Artin had in mind when he began studying braid theory. In Chapter 10, we discuss the primary applications of braid theory to knot theory, including the introduction of the most important invariants of knot theory, the Alexander polynomial and the Jones polynomial. In Chapter 11, motivated by Dirac's string problem, the ordinary braid group is generalized to the braid groups of various surfaces. We discuss these groups from an intuitive and diagrammatic point of view. In the last short chapter 12, we present without proof one theorem, due to Gorin and Lin [GoL] , that is a surprising application of braid theory to the theory of algebraic equations.

From reader reviews:

Bernard Woodley:

Why don't make it to become your habit? Right now, try to prepare your time to do the important take action, like looking for your favorite e-book and reading a publication. Beside you can solve your short lived problem; you can add your knowledge by the e-book entitled A Study of Braids (Mathematics and Its Applications). Try to face the book A Study of Braids (Mathematics and Its Applications) as your good friend. It means that it can being your friend when you truly feel alone and beside that of course make you smarter than ever before. Yeah, it is very fortuned to suit your needs. The book makes you far more confidence because you can know every thing by the book. So , let us make new experience as well as knowledge with this book.

Nancy Maxfield:

Information is provisions for anyone to get better life, information these days can get by anyone at everywhere. The information can be a expertise or any news even restricted. What people must be consider any time those information which is within the former life are challenging be find than now's taking seriously which one would work to believe or which one often the resource are convinced. If you have the unstable resource then you have it as your main information you will see huge disadvantage for you. All those possibilities will not happen with you if you take A Study of Braids (Mathematics and Its Applications) as the daily resource information.

Robert Burmeister:

This book untitled A Study of Braids (Mathematics and Its Applications) to be one of several books which best seller in this year, that is because when you read this book you can get a lot of benefit in it. You will easily to buy this particular book in the book retailer or you can order it by means of online. The publisher of the book sells the e-book too. It makes you more easily to read this book, because you can read this book in your Touch screen phone. So there is no reason to your account to past this guide from your list.

Bethany Zuniga:

As a college student exactly feel bored to be able to reading. If their teacher questioned them to go to the library as well as to make summary for some e-book, they are complained. Just tiny students that has reading's internal or real their passion. They just do what the educator want, like asked to go to the library. They go to generally there but nothing reading critically. Any students feel that studying is not important, boring and can't see colorful photographs on there. Yeah, it is to get complicated. Book is very important for you personally. As we know that on this age, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. So , this A Study of Braids (Mathematics and Its Applications) can make you feel more interested to read.
