Hybrid Wars: The Indirect Adaptive Approach To Regime Change Andrew Korybko

Sputnik International's political analyst and journalist, Andrew Korybko, just published his first book on "Hybrid Wars: The Indirect Adaptive Approach To Regime Change". It was reviewed by the Diplomatic Academy of Russia and released with the assistance of the People's Friendship University of Russia, where Andrew is a member of the expert council for the Institute of Strategic Research and Predictions. His detailed work proves that Color Revolutions are a new form of warfare engineered by the US, with everything from their organizational makeup to geopolitical application being guided by American strategists. But unlike earlier researchers who have touched upon the topic, Andrew takes his work even further and uses the latest examples of the War on Syria and EuroMaidan to argue that the US has deployed a second, more dangerous step to its regime change toolkit.

Hybrid Wars, as he labels them, are when the US meshes its Color Revolution and Unconventional Warfare strategies together to create a unified toolkit for carrying out regime change in targeted states. When a Color Revolution attempt fails, as it miserably did in Syria in 2011, the backup plan is to roll out an Unconventional War that builds directly upon the former's social infrastructure and organizing methods. In the case of EuroMaidan, Andrew cites Western news sources such as Newsweek magazine, the Guardian, and Reuters in reminding everyone that in the days immediately prior to the coup's successful completion, Western Ukraine was in full-scale rebellion against the central government and the stage was set for an Unconventional Syrian-esque War in the heart of Eastern Europe. Had it not been for the sudden overthrow of President Yanukovich, the US was prepared to take the country down the path of the Syrian scenario, which would have been its second full-fledged application of Hybrid War.

Andrew's revolutionary research ultimately shows that it was the US, not Russia, which spearheaded the use of Hybrid Wars, and that given his proven findings, it's irresponsible to even call Russia's alleged involvement in the Ukrainian Crisis a 'hybrid war'. In fact, the US is far ahead of any other country in practicing this new method of warfare, as no other state has attempted a Color Revolution thus far, let alone transitioned it into an Unconventional War when their initial regime change plans failed. While some many think that such occurrences are spontaneous and happenstance, Andrew documents how Hybrid Wars are not only created from the ground-up by the US, but how they're specifically deployed in areas where they'd be most geostrategically advantageous for the promotion of its unipolar policies.

Thus, not only does Andrew describe the very essence of Hybrid Wars, but the final part of his book forecasts where he believes they may happen next. He introduces the groundbreaking concept of the Color Arc, a contiguous line of states stretching from Hungary to Kyrgyzstan and where the waging of Hybrid Wars would most seriously damage Russia's national interests. This is the first time that Color Revolutions have ever been analyzed through a geopolitical prism, and it brings forth a completely different way of looking at this weapon's utilization. This new paradigm is absolutely essential for understanding the US' new approach to regime change and the form, both physical and geopolitical, it's expected to take in the forthcoming years.
