John P. Frisby, James V. Stone

Seeing: The Computational Approach to Biological Vision John P. Frisby, James V. Stone
Seeing has puzzled scientists and philosophers for centuries and it continues to do so. This new edition of a classic text offers an accessible but rigorous introduction to the computational approach to understanding biological visual systems. The authors of Seeing, taking as their premise David Marr's statement that "to understand vision by studying only neurons is like trying to understand bird flight by studying only feathers," make use of Marr's three different levels of analysis in the study of vision: the computational level, the algorithmic level, and the hardware implementation level. Each chapter applies this approach to a different topic in vision by examining the problems the visual system encounters in interpreting retinal images and the constraints available to solve these problems; the algorithms that can realize the solution; and the implementation of these algorithms in neurons. Seeing has been thoroughly updated for this edition and expanded to more than three times its original length. It is designed to lead the reader through the problems of vision, from the common (but mistaken) idea that seeing consists just of making pictures in the brain to the minutiae of how neurons collectively encode the visual features that underpin seeing. Although it assumes no prior knowledge of the field, some chapters present advanced material, This makes it the only textbook suitable for both undergraduate and graduate students that takes a consistently computational perspective, offering a firm conceptual basis for tackling the vast literature on vision. It covers a wide range of topics, including aftereffects, the retina, receptive fields, object recognition, brain maps, Bayesian perception, motion, color, and stereopsis. MatLab code is available on the book's Web site, which includes a simple demonstration of image convolution.

From reader reviews:

Derrick Minor:

Do you have favorite book? If you have, what is your favorite's book? Reserve is very important thing for us to learn everything in the world. Each reserve has different aim or even goal; it means that book has different type. Some people sense enjoy to spend their time and energy to read a book. They are really reading whatever they take because their hobby will be reading a book. Why not the person who don't like reading through a book? Sometime, man or woman feel need book if they found difficult problem as well as exercise. Well, probably you will need this Seeing: The Computational Approach to Biological Vision.

Raymond Bryan:

Information is provisions for anyone to get better life, information these days can get by anyone on everywhere. The information can be a know-how or any news even a concern. What people must be consider whenever those information which is in the former life are challenging to be find than now's taking seriously which one is acceptable to believe or which one the resource are convinced. If you have the unstable resource then you understand it as your main information we will see huge disadvantage for you. All those possibilities will not happen inside you if you take Seeing: The Computational Approach to Biological Vision as the daily resource information.

Francis Pilkington:

Often the book Seeing: The Computational Approach to Biological Vision will bring someone to the new experience of reading a new book. The author style to describe the idea is very unique. In the event you try to find new book to learn, this book very appropriate to you. The book Seeing: The Computational Approach to Biological Vision is much recommended to you to study. You can also get the e-book through the official web site, so you can more easily to read the book.

Amy Joshi:

In this age globalization it is important to someone to obtain information. The information will make someone to understand the condition of the world. The healthiness of the world makes the information better to share. You can find a lot of referrals to get information example: internet, paper, book, and soon. You can see that now, a lot of publisher that print many kinds of book. Often the book that recommended for you is Seeing: The Computational Approach to Biological Vision this e-book consist a lot of the information on the condition of this world now. This book was represented just how can the world has grown up. The terminology styles that writer require to explain it is easy to understand. The writer made some analysis when he makes this book. Here is why this book suitable all of you.
